

## Modeling the Marlee Float Skimmer in HydroCAD

HydroCAD includes several proprietary products in the software as special outlet options. They will be updating the software to include the new Marlee Float skimmers. If you wish to model the skimmers in the software before it is updated, you can manually add these by following the following steps:

Locate the HydroCAD program files. They are typically located on your primary hard drive:

C:\Program Files (x86)\HydroCAD\

Look for the current MarleeFloat files, which are typically located here:

C:\Program Files (x86)\HydroCAD\Outlets\MarleeFloat

Download the new MarleeFloatV2.zip file from the Rymar Website. Extract this file to:

C:\Program Files (x86)\HydroCAD\Outlets\

Once extracted, when you are setting up your pond in HydroCAD and select “Special & User Defined Outlet” the new MarleeFloatV2 folder should show as an option.

If you need additional assistance in modeling the Marlee Float skimmer in HydroCAD or other hydrology software, please contact [jamie@rymarwaterworks.com](mailto:jamie@rymarwaterworks.com) to schedule a video conference training.
